

GONA DAMODHAR REDDY

9989869348 — gonadamodharreddy999@gmail.com — Portfolio — LinkedIn — GitHub

Full Stack Engineer | Node.js | TypeScript | PostgreSQL | Google Cloud

SUMMARY

Backend-first full stack engineer. Built a healthcare scheduling MVP end to end at Dezoko: APIs, auth, cloud deployment, and a Flutter-based clinic app. Currently building a job application tracker with a JD keyword matcher.

EXPERIENCE

Dezoko

Bangalore, India

Full Stack Developer Intern

Jan 2026 – Apr 2026

- Designed and implemented REST APIs in **Node.js**, **TypeScript**, and **PostgreSQL** supporting appointment booking, doctor scheduling, and consultation workflows for a clinic management MVP
- Built a conflict-free scheduling system using **Prisma** and **PostgreSQL** resolving doctor availability, leave periods, and existing appointments simultaneously, preventing double-booking across a multi-role clinic platform
- Developed a triage assignment system in **Node.js** where receptionists enter patient severity and required specialization, automatically routing to an available doctor and bypassing schedule constraints for emergency cases
- Implemented **JWT** + **RBAC** authentication securing role-specific access across doctors, receptionists, and patients in a multi-user clinical platform
- Deployed backend on **Google Cloud Run** with Cloud SQL and signed URL file uploads, enabling scalable and secure handling of patient records
- Integrated **Firebase OTP** phone authentication for clinic staff onboarding, eliminating password management overhead

KPN Farm Fresh

Bangalore, India

Backend Developer Intern

Jul 2025 – Sep 2025

- Migrated cart REST APIs from KPN's core services into IBO's cart service using **Fastify** and **JavaScript**, wiring downstream calls across IBO's catalog, customer, and order services
- Updated IBO's BFF layer (**NestJS** and **TypeScript**) to call IBO core cart REST APIs, replacing existing GraphQL calls to Magento
- Updated API contracts and response structures to align with IBO service interfaces, ensuring consistent data flow across service boundaries
- Managed **PostgreSQL** schema changes via migrations and used **Docker** for local development and testing

PROJECTS

Job Application Tracker | [React](#), [Node.js](#), [PostgreSQL](#), [Gemini API](#) | [Live](#) | [GitHub](#)

2026

- Built a full stack job application tracker with CRUD operations, status filtering, dashboard analytics, and JWT-based authentication, using **React**, **Node.js**, and **PostgreSQL**, deployed on Vercel and Render
- Designed an AI-powered resume-to-JD match feature using the **Gemini API** with structured JSON output, returning a match score, keyword gap analysis, and tailored resume bullet suggestions grounded strictly in the user's actual resume content
- Identified and fixed multiple LLM reliability issues through adversarial testing, including fabricated metrics, verb/scope inflation in generated text, and unreliable self-reported score arithmetic — resolved by moving score calculation into deterministic backend logic rather than trusting model-generated counts
- Implemented AES-256-GCM encryption for user-provided API keys stored in PostgreSQL, decrypted only server-side at the point of use and never exposed to the client

TECHNICAL SKILLS

Backend: Node.js, Express, NestJS, Fastify

Frontend: React, HTML, CSS, TailwindCSS

Languages: JavaScript, TypeScript, SQL

Databases: PostgreSQL

ORM & Query Tools: Prisma

Cloud & DevOps: Google Cloud (Cloud Run, Cloud SQL, Storage), Docker

Auth & APIs: JWT, RBAC, Firebase OTP, REST APIs, GraphQL

Tools: Git, Postman

EDUCATION

The National Institute of Engineering

Bachelor of Engineering in Information Science and Engineering

- CGPA: 7.64 / 10.00

Mysore, Karnataka
Dec 2021 – May 2025
